Ordinance #54, Section 1.9 of the Ordinance requires the following:

All commercial (non-residential) facilities (buildings) will be required to install a pressure reduction principle assembly backflow preventer, the quality of which will be Wilkins, model number 975XLU (Specification Sheet attached) or its equivalent in quality and performance. All commercial buildings will be required to install a pressure reduction principle assembly within a ninety (90) day period after being notified by Town of the requirement to do so. Residential buildings will not be required to install a backflow prevention assembly, unless there exists a swimming pool, an in-ground irrigation system, or a business use located within the residence which could endanger the water distribution system with contamination; by way of example but not limitation such use may be a beauty or nail salon or any chemical mixing activities.
